

HC FLOW METER

Hydrawise™ Ready

Quick Start Guide

hunterindustries.com

HC Flow Meters

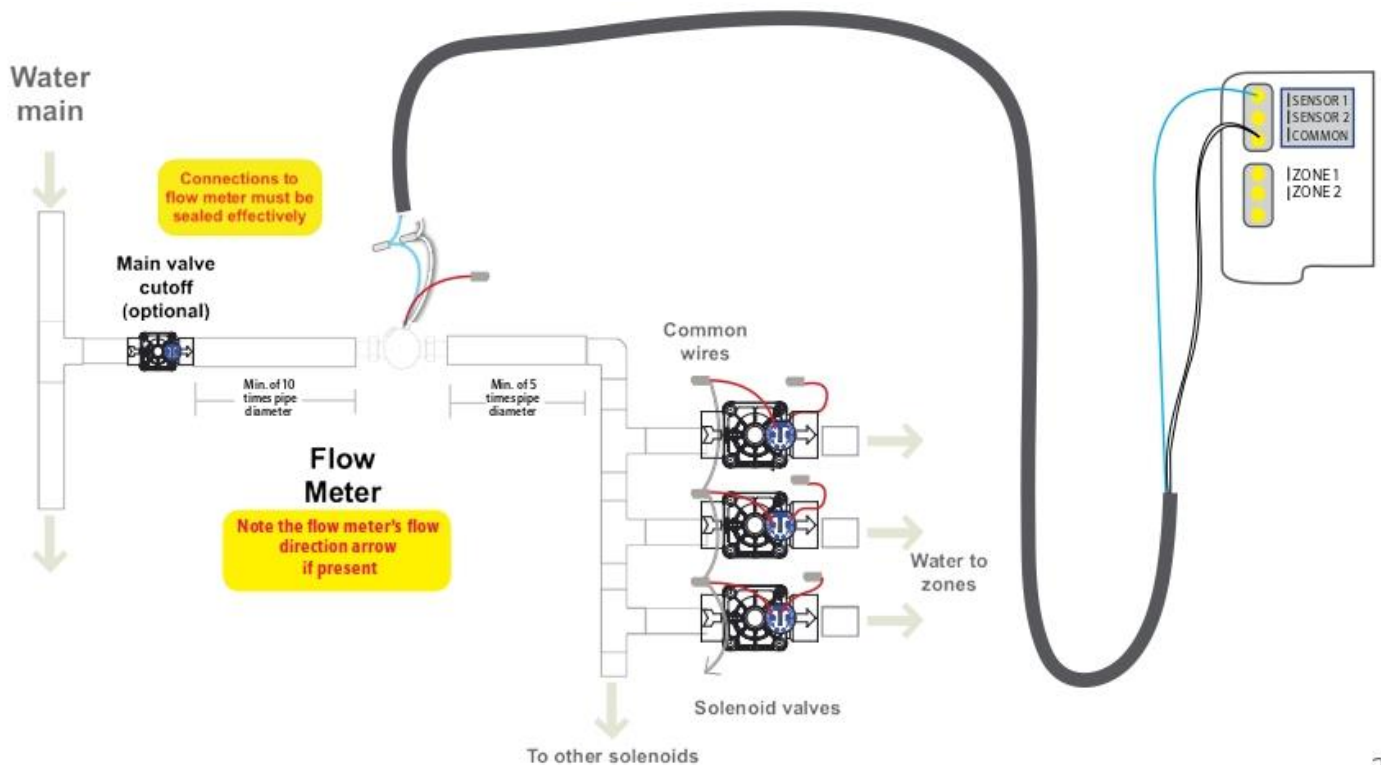

The flow meter consists of two parts:

- Flow meter body:** The flow meter body contains an analog dial for manual readings as follows. Your flow meter will have three wires protruding from the flow meter's body. The wires need to be connected to the sensor inputs on the controller for remote measurement. In all models, only two wires (blue and white) are used.
- Adapter:** Each flow meter has an adapter to allow connection to your irrigation system.

Note: The flow meter will read in U.S on the dial. You can change the units in the app to gallons (gal) or liters.

Dial Marking	Measurement Unit
X0.01	0.01 gallon
X0.1	0.1 gallon
X1	1 gallon
X10	10 gallons
X100	100 gallons

PLANNING

Planning is an important step in the successful installation of your Hunter flow meter and the reliable operation of your irrigation system.

3. **Flow meter entry location:** Flow meters are installed between the master valve and zone valves. To avoid false alerts, there should be no water taps or other uncontrolled water use on the downstream side of the flow meter. If all solenoids connected to the controller are not grouped together, it may be necessary to install more than one flow meter. The flow meter should be installed with 10 times the pipe diameter before and five times the pipe diameter after the flow meter of straight pipe.
4. **Cable:** Two-wire cable is required. The cable gauge is determined by the total length of cable between the controller and the flow meter. For cable lengths greater than 100', lightning-prone areas, or cable running near buildings, use shielded cable. The cable should consist of two dedicated wires and must not be in the same conduit or cable bunch as the solenoid wires. Do not share the common wire of the solenoids with the common of the sensors.

Flow Meter Cable Length Chart

Wire Size	Max Length
Gauge	Feet
20	240
18	1,000

INSTALLING

The following instructions assume you have already installed your Hydrawise controller.

- 1. **Flow meter body:** The flow meter has a marking on the body indicating the direction of water flow. Installation of the flow meter must be in the correct orientation with water flowing in the direction of the arrow on the flow meter body. All HC flow meters must be installed horizontally with the dial facing upwards.
- 2. **Connect flow meter wire:** Two-wire cable is required. The cable required to connect your flow meter must be dedicated to the flow meter and not shared with the common wire of the valves or other sensors. The cable gauge is determined by the total length of cable between the controller and the flow meter. The general rule is that 0.5 mm (20GA) wire is good for a run of up to 240 feet. Connect the wires to your Hydrawise controller.

Note: All wire connections should be done using waterproof connectors.

Wire Color	Sensor Terminal Block
White	Common
Blue	SEN1 or SEN2
Red	Not used: Wire should be capped with waterproof splice.

CONFIGURING

Configuration of your flow meter is completed using your Hydrawise account.

- 1. **Log in to your account:** Enter your log-in information.
- 2. **Create a flow sensor:** It is important that you select the correct flow meter when configuring your Hydrawise app. Choosing the wrong model may cause the Hydrawise controller to measure the wrong water flow.

HC FLOW METER SELECTION CHART FOR THE HYDRAWISE APP		
METER SIZE	DESCRIPTION	U.S. GALLON PULSE RATE
¾"	¾" flow meter	1 pulse per 0.1 U.S. gal.
1	1" flow meter	1 pulse per 1 U.S. gal.
1½"	1½" flow meter	1 pulse per 1 U.S. gal.
2"	2" flow meter	1 pulse per 1 U.S. gal.
