

LUNA

Thanks to its sloping light beam, the LUNA is ideal for illuminating garden elements like fences, bushes, walls and trees. The wide light beam can illuminate objects evenly and helps to create a monumental effect. The LUNA can also be perfectly combined with the SPIKE accessory. This ground pin makes it easy to install the LUNA in loose surfaces like soil, gravel or lawn.

Important: The standard LUNA ground light is not supplied with a ring. Complete your ground light by combining it with the RING 68 in the material and color of your choice. The aluminum RING 68 is available in the colors Black and Pearl Grey. However, the RING 68 is also available in Stainless Steel.
